Nitrate Water Testing

What? A nitrate is “a naturally occurring chemical made of nitrogen and oxygen, found in air, soil, water, and plants. Nitrate is a common contaminant found in wells, which can cause Blue Baby Syndrome.” MN Dept of Health

Who? All Well Owners, especially if there are infants or elderly living in the home.

When? **Thursday, October 19th from 10am-2pm**

Where? Milaca High School

How?

1. Run the Water for 3 Minutes
2. Write your Name on a Baggie or Glass Jar.
3. Fill Baggie or Glass Jar with 1/2 Cup of Water. Store in the Refrigerator, no more than 24 hours before testing.
