

RUM RIVER 1W1P MEMORANDUM

Date: February 3, 2020

To: Rum River 1W1P Technical Committee

From: Julie Blackburn, RESPEC (julie.blackburn@respec.com or 651.605.5705)

RE: Determining Surface Water Goals, Measures, Analysis, and Targeted Resources

This memorandum is an overview to the separate documents that have been developed for each of the three surface water issue statements; quantity, quality, and protection. For the document for each issue statement, each goal is presented separately with a summary of the following components:

- Measurable outcome
- Measure
- Frequency of measure
- Potential measures of level of effort/activity to address the goal
- Targeting implementation activities.

Some of the goals have components with missing information. This is because we are unable to make suggestions of how to evaluate, measure, or target for the goal without further detail from the Technical Committee. Where we were able to, RESPEC provided suggestions for each of these components as well as an analysis for prioritizing specific resources or targeting implementation actions. All of these are draft for consideration and considered a starting point for our discussion at the February 10, 2020 meeting.

Please come to the meeting prepared to suggest additional details on each of the components for each surface water goal. Once we have the necessary information for each goal, RESPEC can begin to further define resource targets, draft goals, based on Technical Committee selected implementation strategies.
