Re: Quote for Laboratory Services

Dear Lynn,

Thank you for inquiring about our water testing services. You requested a quote for testing the following packaged group of analytes to include Total Coliform Bacteria, Nitrate, Arsenic, Lead and Manganese. Based on those parameters, I am happy to provide you with the following special pricing of \$115.00 per packaged group of analytes. This includes all the bottles and packaging needed. We will package the necessary bottles along with instructions and a chain of custody into individual boxes for you to handout to your clients. Your clients will need to deliver the samples directly to the lab or overnight the kit with samples to us. You can expect test results within a week of the date we receive the samples with the test report emailed to you, notwithstanding unforeseen circumstances.

Thank you for the opportunity to serve you with our laboratory services,

  
Kevin Kloepfner  
President  
Water Laboratories, Inc
